

SERVERS ON AN EU PALLET

YOU WILL NEED

- EU Pallet
- Cardboard for the bottom (If you have, you can also place a piece between each layer)
- Wrapping plastic

1 HOW TO PACK

Stack the servers on the cardboard. Make the stacks as stable as possible.

REMEMBER:

- The servers should lie down, not stand upright.
- Do not stack the servers higher than max 1 meter. Doing so might damage the bottom servers.
- Check that the servers are placed within the edges of the pallet.
- If you have cardboard available, please place cardboard between each layer.

Wrap the servers securely to prevent them from moving during transport.

REMEMBER:

- Secure the plastic under the edges of the pallet to stabilize the servers during transport
