

T1A WILL PROVIDE THE FOLLOWING

- EU Pallet
- Pallet Box (Folded)

HOW TO PACK

1. There are 2 options for packing.

Please choose the one allowing you to fit more screens in the box (The capacity of each layer is approx. 8 to 10 monitors):

Option 1: Place the TFT's in the box with the screens facing each other. Place bubble wrap on both TFT's, so there is a double layer between them.

Option 2: Place the TFT's on an angle behind each other with the screens all facing the same direction. Cover the screens with bubble wrap and make sure its between each TFT.

Note: Same procedures are used for TFT's with no feet.

2. When the bottom layer is filled, please put a cardboard between the layers and repeat the process.

3. Finish the packing by closing the top of the box with tape. Optionally you can wrap the entire box in plastic to seal it.
